PROJECT DESCRIPTION

IMDb, short for the Internet Movie Database, is a widely recognized online platform that provides a comprehensive database of information related to films, television shows, actors, directors, and other entertainment industry professionals. Users can access details such as cast and crew lists, plot summaries, user reviews, ratings, and trivia for a vast array of movies and TV shows from around the world. IMDb serves as a valuable resource for film enthusiasts, industry professionals, and casual viewers seeking information about their favourite media. It has become a go-to platform for discovering, exploring, and learning about the world of cinema and television.

APPROACH

- Downloaded the given datafile
- Understanding the datafile
- Checking the blanks and outliers
- Removing unwanted data
- Drawing summary from the data
- Used formulas, pivot table and charts

TECH STACK USED

- Microsoft Excel 2016

INSIGHTS

- Movie Genre Analysis: Analyse the distribution of movie genres and their impact on the IMDB score.** Task: Determine the most common genres of movies in the dataset. Then, for each genre, calculate descriptive statistics (mean, median, mode, range, variance, standard deviation) of the IMDB scores. Hint: Use Excel's COUNTIF function to count the number of movies for each genre. You might need to manipulate the 'genres' column to separate multiple genres for a single movie. Use Excel's functions like AVERAGE, MEDIAN, MODE, MAX, MIN, VAR, and STDEV to calculate descriptive statistics. Compare the statistics to understand the impact of genre on movie ratings.

INFERENCE-Maximum count of movies is Drama followed by Comedy genre. Lowest is film Noir Genre. War and History genre though have less count in movies but their ratings are more than 7 on average. It means people like movies based on facts and history.

2. Movie Duration Analysis: Analyse the distribution of movie durations and its impact on the IMDB score. Task: Analyse the distribution of movie durations and identify the relationship between movie duration and IMDB score.

Hint: Calculate descriptive statistics such as mean, median, and standard deviation for movie durations. Use Excel's functions like AVERAGE, MEDIAN, and STDEV. Create a scatter plot to visualize the relationship between movie duration and IMDB score. Add a trendline to assess the direction and strength of the relationship.

MEDIAN	106
MODE	101
STDEV	22.6224
VARIANCE	511.7729
MINIMUM	37
MAXIMUM	330
RANGE	293

INFERENCE-On average duration of movie is 110 minutes. Median is 106 and mode 101. Maximum time duration of a movie is 330 minutes and the minimum duration is 37. There is little positive correlation between IMDB score and duration of the movie.

3. Language Analysis: Situation: Examine the distribution of movies based on their language.

Task: Determine the most common languages used in movies and analyze their impact on the IMDB score using descriptive statistics.

Hint: Use Excel's COUNTIF function to count the number of movies for each language. Calculate the mean, median, and standard deviation of the IMDB scores for each language. Compare the statistics to understand the impact of language on movie ratings.

INFERENCE- More number of movies are made in English language. A non-verbal movie and some movies by Persian language and Indonesian language movies though produce less movies have IMDB score near and above 8. So, the stories of such language's might have attracted the audience and reviewers' attention. More movies and remakes can be made from them.

- 4. Director Analysis: Influence of directors on movie ratings.** Task: Identify the top directors based on their average IMDB score and analyze their contribution to the success of movies using percentile calculations.

Hint: Calculate the average IMDB score for each director. Use Excel's PERCENTILE function to identify the directors with the highest scores. Compare the scores of these directors to the overall distribution of scores.

director_name	avg imdb_score
Akira Kurosawa	8.7
Alfred Hitchcock	8.5
Asghar Farhadi	8.4
Charles Chaplin	8.6
Christopher Nolan	8.425
Damien Chazelle	8.5
Majid Majidi	8.5
Marius A. Markevicius	8.4
Richard Marquand	8.4
Ron Fricke	8.5
Sergio Leone	8.4333333333
Tony Kaye	8.6
LARGE	8.7
CONTRIBUTION	0.92307
PERCENTILE	7.6

INTERPRETATION-The top ten directors with highest scores were taken. On the basis of IMDB score the success rate of a move from the director Akira Kurosawa is 92 percent. He is the director with highest average IMDB score.

- 5. Budget Analysis: Explore the relationship between movie budgets and their financial success.** Task: Analyse the correlation between movie budgets and gross earnings, and identify the movies with the highest profit margin.

Hint: Calculate the correlation coefficient between movie budgets and gross earnings using Excel's CORREL function. Calculate the profit margin (gross earnings - budget) for each movie and identify the movies with the highest profit margin using Excel's MAX function.

CORRELATION
